AMENDMENT TO THE TITLE:

Please amend the title as follows:

DEFINING A RESOURCE ~~TEMPLATES~~ TEMPLATE FOR LOCATING

RELEVANT RESOURCES

AMENDMENTS TO THE SPECIFICATION:

Please amend paragraph [0007] on page 3 as follows:

[0007] FIG. 1 shows a resource finder process 100 that enables a user to readily locate a resource considered relevant. Process 100 includes defining (110) a resource template (defining resource template information), searching (120) with the resource template information, determining (130) if a resource is found within a context that matches the resource template information, [[and]] if a matching resource is found, reporting (140) or displaying (140) the found resource to the user, and if a matching resource is not found, exiting (150) the resource finder process 100.

Please amend paragraph [0008] beginning on page 3 and ending on page 4 as follows:

[0008] There exists a design time and a runtime for resource templates. The design time ~~forth~~ for the resource template includes defining (110) resource template information which refers to defining resource search criteria. Resource search criteria may include an object class definition that defines the type of resource, e.g., a person, group of people, a room, a conference, a hotel, etc. Resource search criteria may include attribute definitions that define attributes of the object class, for example, a size, a color, a location, a type of equipment, etc. Typically, each resource template definition has a name, for example, "pick meeting room", "book table for lunch", "schedule conference call", "find keynote speaker".
